To Scott Aycock <scotta@Coic.org>; Jennifer Greco <jgreco@coic.org>

Thanks, Scott and Jennifer.

I would be the primary Gordon Jones, and Floyid Nicolas would be the secondary.

OSU Extension and College of Agricultural Sciences can bring a science-based approach to discussions of on-farm water use efficiency and irrigation management and can provide data on crop water use and crop impacts of various irrigation practices. In addition, we can address the role of irrigated crop production in the context of agriculture broadly in the basin, can provide research-based information on agriculture's impact on water quality, and can bring in insights from colleagues at other universities across the west.

Thanks,
Gordon
